Smart Medicine Managment System

INTRODUCTION

IoT enables smart healthcare solutions for real-time monitoring. This system ensures timely medicine intake using a Telegram Bot and an automated smart medicine box

OBJECTIVES

- Ensure timely medicine intake
- Reduce human dependency
- Enable remote monitoring
- Improve patient safety and healthcare efficiency

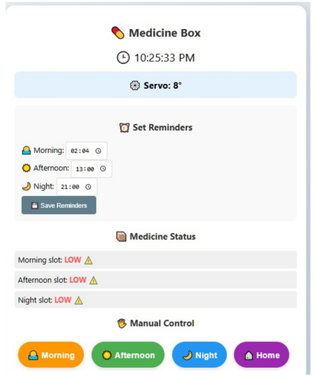

WORKING PRINCIPLE

- User sets medicine time using Telegram Bot
- System activates at scheduled time
- Medicine box opens automatically
- IR sensor checks if medicine is taken
- If not taken → buzzer + repeated notifications
- Confirmation sent after medicine intake
- Box closes automatically

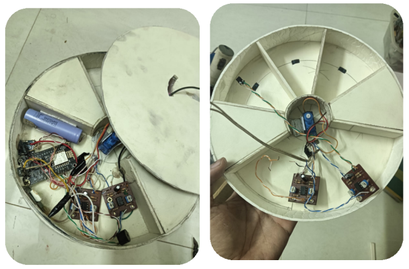

TECHNOLOGIES USED

- ESP8266 Wi-Fi Microcontroller
- IR Sensor
- Motor & Buzzer
- Telegram Bot API
- Embedded Programming (Arduino)

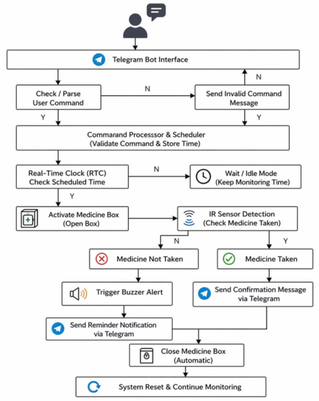

Design of Software

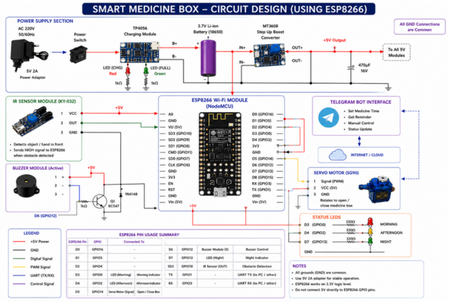

Design of Hardware

Methodlogy

CONCLUSION

This system provides a simple, affordable, and effective solution for ensuring proper medicine intake. By combining IoT automation with Telegram-based communication, it improves patient safety, reduces missed doses, and enhances healthcare monitoring efficiency.
