AI-POWERED ANTI-SPY CAMERA & ROGUE SIGNAL DETECTOR

Raisha Anan, Fatima Azim Mouli, Tasfia Tahmid | Batch 17 | Dept. of CSE, BAUET
Supervisor: Md. Fatin Nibbrash Nakib

INTRODUCTION

- Hidden cameras & rogue signals threaten privacy in homes, offices, hotels
- Existing detectors are expensive or limited
- We propose an AI + signal-analysis system for real-time detection

OBJECTIVES

Detect hidden spy cameras

Identify rogue wireless signals

Send instant alerts

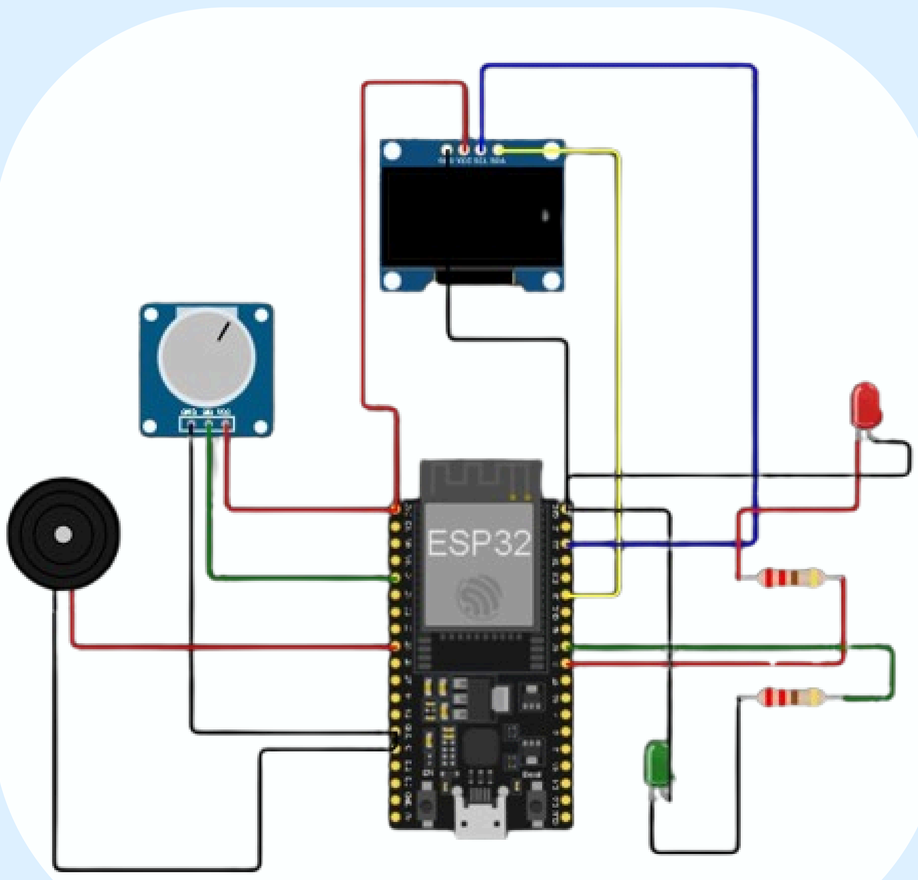

Enhance privacy & security

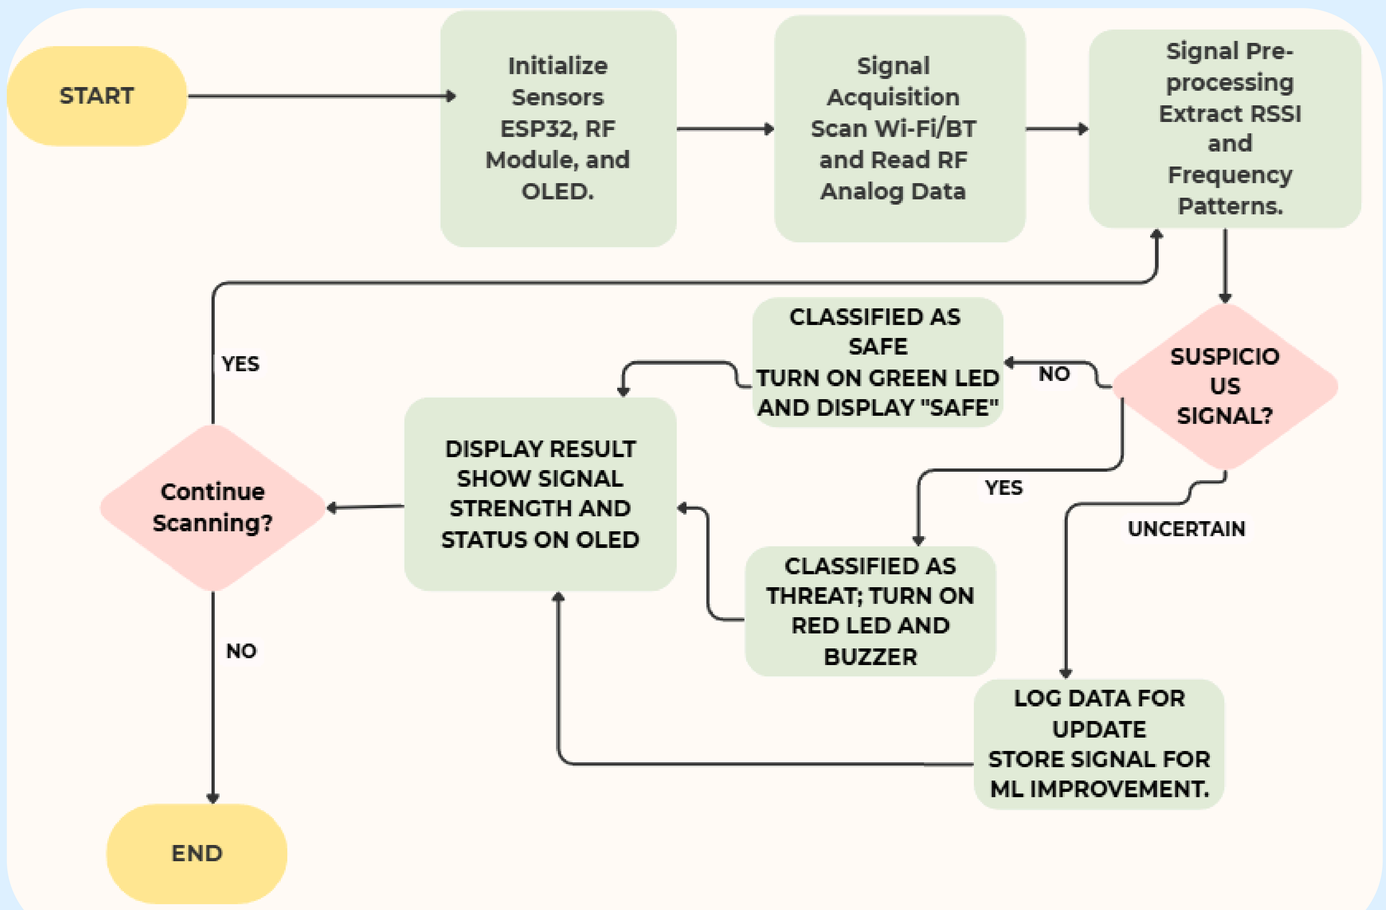

Analyze patterns in real time

CORE TECHNOLOGY & METHODOLOGY

System Architecture

Methodology

Results

95%	4.5%	3.3 s	4800 bdt
Detection Accuracy	*False alarm rate*	*Avg. alart latency*	*Prototype cost*

Future Work & Conclusion

- IoT & mobile app integration
- Detect encrypted/low-power signals
- Continuous model retraining

An affordable AI-based system to detect hidden cameras and rogue signals, improving privacy for homes, offices, and hotels.
